MOUNTNEY *Through the Years*

In 1977, Mountney was formed by Albert and Linda Mountney to manufacture and supply Steering Wheels for the Automotive Aftermarket. Around the same time, Kimpton Marketing Ltd was formed following the success of sales Agent Mike Kimpton, employing 7 representatives around the UK. Kimpton Marketing

Ltd was appointed to represent Mountney and expand their sales, something which was done very successfully over the coming years. The Mountney's had their son and daughter join the business and were producing 1500-2000 steering wheels per week. When a customer inquired for an initial order through Kimpton Marketing for 3000 steering wheels, the Mountney's were unable to cope with this expansion and refused the order. Through this, both parties realised that there was huge potential but the Mountney's were not able to take the business to the next level. 2 weeks after refusing the order, Albert and Linda Mountney sent Mike a proposal to buy the business, something that was initially swept under the carpet.

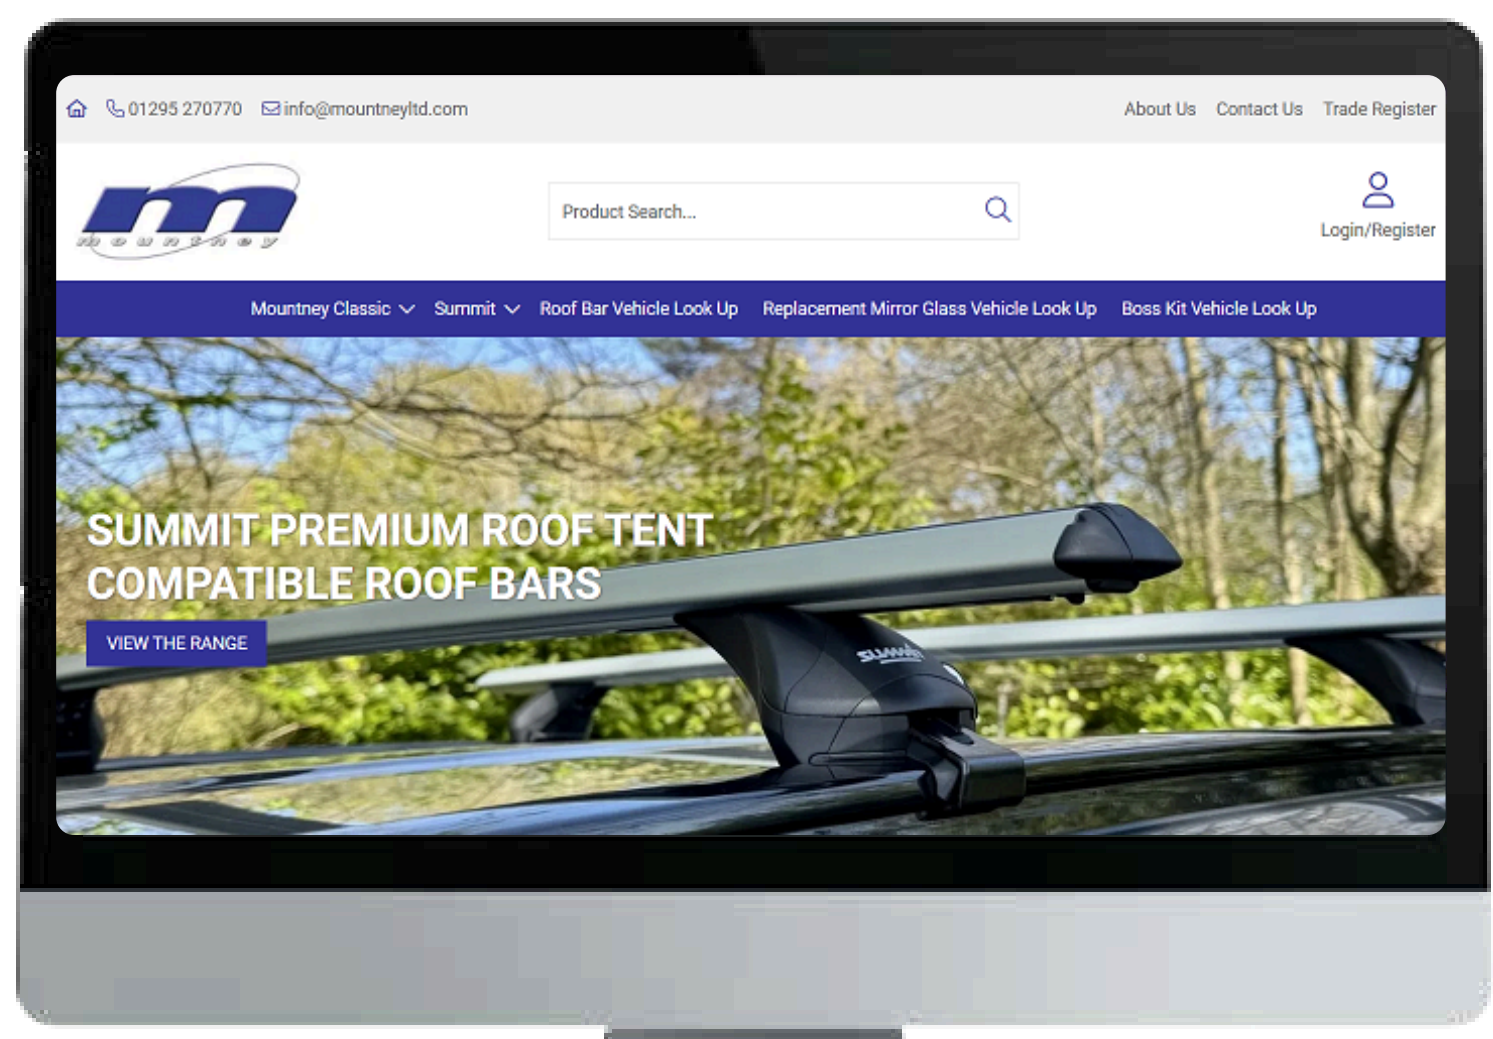

In 1991, Mike Kimpton was once again approached to buy Mountney and this time, Mike agreed. The company continued to manufacture Steering Wheels in Essex until once again, the manufacturing struggled to keep up with the ever expanding demand. In 1995, Springalex, another very well know aftermarket brand, approached Mike and Mountney to buy resulting in sending all of the equipment up to Coldstream in Scotland, causing a 12 mile traffic jam as slow moving wide load lorries struggled to move the powder coating ovens.

Over the years, Mountney and Kimpton Marketing would go from strength to strength and allow for the company to expand into other areas. In 2005, Mountney purchased Gmax Motorsport LTD to add to this portfolio and in 2007, Mountney purchased Summit Accessories, completing a project to ensure Mountney Ltd is a leader in specialist aftermarket products. As of 2018, the Mountney Ltd range includes Steering Wheels and Accessories for classic cars, Roof Bars for Passenger and Commercial Vehicles, Roof Boxes, Cycle Carriers, Sports suspension, Thermal Blinds for motor homes, internal and external mirrors, Mirror Covers and Replacement Mirror Glass.

PASSENGER VEHICLE

REPLACEMENT MIRROR GLASS

Your vehicle will fail an MOT test if you do not have a drivers side mirror glass installed, or if the mirror glass is broken!

KEEP LEGAL, KEEP SAFE.

Stick on & backing plate mirror glass options are available for passenger vehicles.
Summit Replacement Mirror Glass is a convenient replacement for your original mirror glass.

Made to a full O/E (original equipment) specification and quality, Summit Replacement Mirror Glass will ensure your car remains road legal with great visibility.

The Standard Replacement Stick-On Mirror Glass come ready to fit with a strong and durable adhesive backing that can be applied straight on top of any existing damaged mirror glass, for a quick and easy solution.
Full detailed fitting instructions with diagrams are included.

Standard and anti-dazzle stick on glass is also available as 'cut to order' if your vehicle make and model is not covered by our application guide.

Supplied with adhesive pad where applicable.

Standard - A quick replacement for your broken mirror glass

Anti-Dazzle - Tinted glass to improve visibility by reducing glare and dazzling lights

Aspheric - Wide angle to eliminate blind spots, giving you a wider view of the road

Mirror size: 23cm x 15cm, 9" x 6"

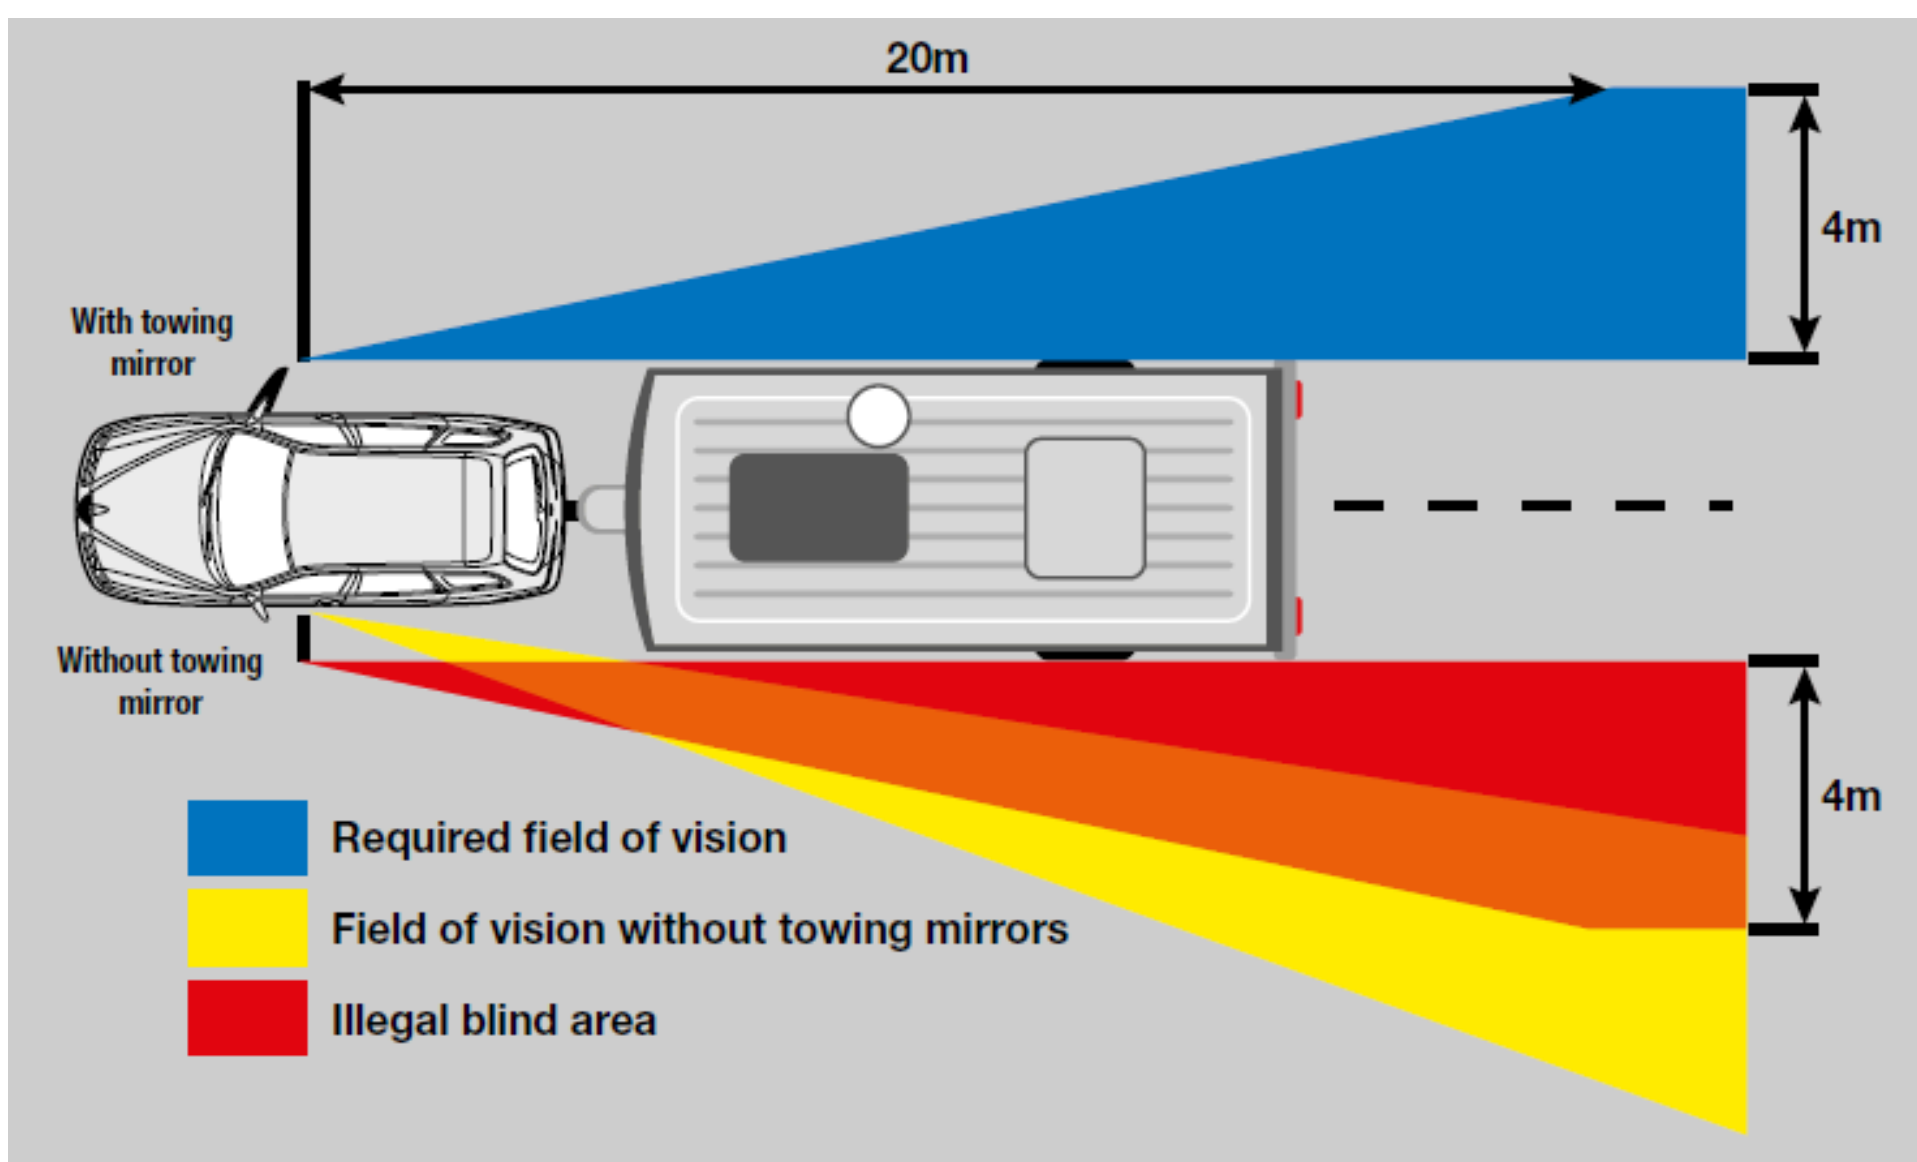

Main glass - flat, blindspot glass - convex, e-marked.

Towing mirrors are a legal requirement for the vast majority of cars towing trailers and caravans. If the trailer or caravan you want to tow is wider than the rear of your car then you must fit towing mirrors.

The law specifies that you must have a clear field of vision for 4 metres out from the side of your caravan or trailer; and 20 metres clear vision behind the driver. The diagram below shows the area either side of the car that you need to be able to see clearly. Without the towing mirrors you will have blind spots caused by the sides of your caravan or trailer.

The law also specifies a maximum distance that the towing mirrors must not extend out beyond the width of your caravan or trailer. Cars manufactured after 26th January 2007 must not use towing mirrors that extend more than a maximum distance of 25cm from the sides of the caravan or trailer. For cars manufactured before this date this is reduced to a maximum distance of 20cm.

As well as breaking the law if you chose not to fit towing mirrors when towing you run the risk of; a 3 point penalty on your driving licence, being prosecuted by the police and a fine of up to £1000 for each mirror infringement. Finally, don't forget to remove your towing mirrors when you have detached the caravan or trailer; it is an offence to drive with them still attached.

All of Summit's towing mirrors are E-marked and conform to EC standards. Safety glass is used in all of our towing mirrors.

The strong clamps and straps keep the mirrors stable and firmly in position when travelling at speed and they are able to withstand strong gusts of wind.

UK BADGES & STICKERS

Motorists driving outside of the UK must now have a UK identifier displayed clearly on the rear of their vehicle.

CP-6 Fully Magnetic UK Country Plate

CP-7 Self Adhesive UK Country Plate

CP-8 Self Adhesive UK Number Plate Stickers - Pair
White identifier for front & yellow identifier for rear number plate.

If your number plate includes the UK identifier with the Union flag you do not need a UK sticker.

However, you will need to display a UK sticker on the rear of your vehicle if your number plate has any of the following:

- A GB identifier with the Union flag
- A Euro symbol
- A national flag of England, Scotland or Wales
- Numbers and letters only - no flag or identifier

If you're driving in Spain, Cyprus or Malta, you must display a UK sticker no matter what is on your number plate.

You do not need a UK sticker to drive in Ireland.

UK stickers for driving in Europe.
Available as fully magnetic or self adhesive.

- Simply attaches to the steering wheel to lock in place & restrict movement
- Cost effective solution to vehicle security
- Highly visible deterrent
- Peace of mind wherever you park
- Easy fitting instructions for quick installation
- 2 keys provided

SUM-901

Steering Wheel Lock
With Double Hook

This lock fits across the steering wheel and hooks around both sides. It has an adjustable telescopic node design which expands and contracts, so the bar can be easily adjusted and fit different size steering wheels. The lock is manufactured using hard wearing steel with a soft rubber outer coating to prevent any scratches to the steering wheel.

As vehicle theft continues to be a concern, many car owners are turning to steering wheel locks as a practical, visible, and effective deterrent. This device, which physically locks the steering wheel in place, makes it difficult for would-be thieves to drive the car away. The lock attaches across the steering wheel, limiting its movement and rendering the car undrivable without first removing the device.

Compared to other anti-theft products like car alarms or GPS tracking systems, steering wheel locks are relatively inexpensive. They provide a cost-effective solution for vehicle security.

SUM-902

Steering Wheel Lock
With T-Bar Design

This lock has a padded anti-slip handle and fits across the top section of the steering wheel, with the ergonomically shaped bar fixing in place on the dashboard. It has a spring-loaded clamp which has a soft rubber layer to prevent any scratches to the steering wheel. The lock has a multiway design meaning you can adjust the clamp according to the size of the steering wheel.
