

PREMIUM ALUMINIUM ROOF BARS

IF YOU ARE USING THESE ROOF BARS TO MOUNT A ROOF TENT

Please do the following checks below:

Check the permitted weight load of your vehicle roof, and the maximum weight load of these roof bars, to ensure that combined it can safely carry the weight of your chosen roof top tent.

Carefully follow all roof top tent and roof bar assembly, installation and usage instructions.

Check and make sure that the fastening parts of the bars and roof top tent are fixed securely.

Please also check that the load is fastened properly by pushing and pulling it. **Recheck regularly.**

Before driving off and at 10 miles and then every 100 miles, check that all securing screws/bolts, clamping devices and foot attachments are fully tightened, in accordance with the roof bar and roof top tent instructions.

Also check above items after using the roof tent.

Neither the roof bars nor the load should project beyond the maximum profile of the vehicle when traveling on the public highway.

It is your responsibility to ensure that all loads are correctly and safely secured.
